

#KeepitOn: Joint letter on keeping the internet open and secure

Re: Internet shutdown in Eastern Ethiopia

Your Excellency,

We are writing to urgently request that you ensure the stability and openness of the internet. We have received reports that your government has shut down the internet in Jijiga, Dire Dawa, and Harar cities in Ethiopia. On behalf of the more than 150 organizations from over 50 countries that make up the #KeepitOn Coalition, **we implore you to keep the internet on in Eastern Ethiopia.**

Internet shutdowns harm human rights and economies

Research shows that internet shutdowns and violence go hand in hand. [1], [2] Shutdowns disrupt the free flow of information and create a cover of darkness that shields human rights abuses from public scrutiny. Journalists and media workers cannot contact sources, gather information, or file stories without digital communications tools. Justified for various reasons, shutdowns cut off access to vital information, e-commerce, and emergency services, plunging whole communities into fear. Disruptions also destabilize the internet's power to support small business livelihoods and to drive economic development. A 2016 study by the Brookings Institution, a prominent think tank, revealed that shutdowns drained \$2.4 billion from the global economy between 2015 and 2016. [3]

The open Internet has fostered unprecedented creativity, innovation, and access to information and to other kinds of social, economic, cultural, and political opportunities across the globe. The technical means used to block access to information online often dangerously undermine the stability and resiliency of the Internet. **Internet shutdowns must never be allowed to become the new normal.**

During his inaugural speech, Prime Minister Abiy Ahmed (PhD) reiterated his government's commitment to protect freedom of expression and access to information. Extending access to the internet remains a key driver to uphold this commitment. Moreover, **we estimate the current shutdown in Eastern Ethiopia has cost your country \$32,544 per day in direct economic costs, and will slow the realization of economic, social, and cultural rights broadly.** [4]

Internet shutdowns violate international Law

A growing body of findings and resolutions hold that intentional disruptions to the internet violate international law. In July 2016, the United Nations Human Rights Council passed, by consensus, a resolution on freedom of expression and the internet with unambiguous language on internet shutdowns and other restrictions on freedom of expression online. Resolution A/HRC/RES/32/13:

condemns unequivocally measures to intentionally prevent or disrupt access to or dissemination of information online in violation of international human rights law and calls on all States to refrain from and cease such measures.

The Council sent a clear message that the blocking and throttling of networks, applications, and services that facilitate human rights is unacceptable behavior.

Experts from the United Nations, Organization for Security and Co-operation in Europe (OSCE), Organization of American States (OAS), and the African Commission on Human and Peoples' Rights (ACHPR), also issued an historic statement declaring that internet "kill switches" can never be justified under international human rights law, even in times of conflict. [5]

In November 2016, ACHPR adopted a resolution on the right to freedom of information and expression on the internet in Africa, which noted its concern over "the emerging practice of State Parties of interrupting or limiting access to telecommunications services such as the Internet, social media and messaging services, increasingly during elections." ACHPR/Res. 362(LIX)]

The UN Human Rights Committee, the official interpreter of the International Covenant on Civil and Political Rights, emphasizes in its General Comment no. 34 that restrictions on speech online must be strictly necessary and proportionate to achieve a legitimate purpose. [6] Shutdowns, by contrast, disproportionately impact all users, and unnecessarily restrict access to information and emergency services communications during crucial moments. Shutdowns are neither necessary to, nor effective at, achieving a legitimate aim, as they block the spread of information, contribute to confusion and disorder, and obstruct public safety. Shutdowns are neither necessary to, nor effective at, achieving a legitimate aim, as they often spread confusion and encourage more people to join public demonstrations.

We respectfully request that you use the important positions of your good offices to:

- Ensure that the internet, including social media, is restored
- Publicly declare your commitment to keep the internet on, and to notify the public of any disruptions
- Encourage telecommunications and internet services providers to respect human rights through public disclosures on policies and practices impacting users.

We are happy to assist you in any of these matters.

Sincerely,
